Highlighted 7.5 Changes
==

==

Upcoming END OF LIFE announcement for WranglerView

==

This will be the last WranglerView release. Please seriously consider
switching over to the new Qube UI at your earliest convenience.

We had previously projected to discontinue shipping WV after 7.0, but are
releasing it one more time, only to provide transitional support for
customers still using this legacy component.

WV will not have any major new features or functionality added to this or
future versions, and any change will be limited to bug fixes or minor
feature additions necessary to facilitate customer needs until they can
make the transition over to the new Qube UI.

All major functionality encompassed in WV is anticipated to have been
ported over, with some additional features added, to the new Qube UI.

========================
New features
