

proxy_password

Synopsis

Proxy_password must be set when using a [proxy_account](#) other than the default, local "qubeproxy" account.

The proxy_password value must be set to the encrypted string returned by the [qbhash](#) tool. Cut and paste the value returned by qbhash into the proxy_password field.

Example

```
proxy_password = 06dee4e09a917474ea788e4f5c105bc505cf8a5629be461d3415fe60cbbba6a
```
