

# Common Supervisor Actions

The `qbadmin` command is a useful tool for a number of actions for the Supervisor. It can provide information about the Supervisor, suspend job dispatch service, and command the Supervisor to reread and pass on configuration information to the Workers. The `qbadmin` command is located in the `sbin` directory of the Qube! distribution.

- Linux: `/usr/local/pfx/qube/sbin/qbadmin`
  - Mac OS X: `/Applications/pfx/qube/sbin/qbadmin`
  - Windows: `C:\Program Files\pfx\qube\sbin\qbadmin.exe`
