

qkill

[[Description](#)] [[Usage](#)] [[Options](#)] [[Notes](#)] [[Examples](#)] [[See also](#)]

Description

qkill requests the Supervisor to kill a list of jobs.

Usage

```
qkill [options] jobID... | 0
```

where *JobID* is one or more job IDs, and 0 is a wild card token representing all the user's jobs.

Notes

In order to kill jobs, the user must have either of the following qube privileges:

- kill
- admin

Refer to [Permissions](#) or [qbusers](#) for more detail on the Qube! permission scheme

Examples

Kill only subjob 12354.0:

```
% qckill 12354.0
```

Kill all subjobs in 12345:

```
% qckill 12345
```

Kill all of user anthony's jobs:

```
% qckill --user anthony 0
```

Kill all of user anthony's jobs which are running:

```
% qckill --running --user anthony 0
```

Kill only the jobs which are pending in the list of jobs 11234 1235 and subjob 1236.0:

```
% qckill --pending 11234 1235 1236.0
```
