

Supervisor Logs

The Supervisor outputs log information to a file called `supelog`. By default, the file is located in:

- Linux / Mac OS X `/var/log/supelog`
- Windows Vista/2008/7 `C:\ProgramData\pfx\qube\logs\supelog`
- Windows XP/2003 `C:\Program Files\pfx\qube\logs\supelog`

Linux Note

Under Linux, the logs are periodically rolled over by an installed crontab script.

Setting the location of the Supervisor log file

1. Modify the following setting in the `qb.conf` file:
`supervisor_logfile = logfile_path`
where `logfile_path` is the path to the Supervisor log file.
2. Restart the Supervisor to establish the new setting.
