

supervisor_log_flags

Synopsis

```
supervisor_log_flags = mask
```

Mask specifies which events the administrator wants to track in the job's history file. The field is described by a integer with the individual bits to signify which components to log.

Values

- job = 1
- subjob = 2
- work = 4
- callback = 8
- user = 16
- admin = 32
- mail = 64

Examples

```
supervisor_log_flags = 3  
supervisor_log_flags = "job,subjob"
```

Defaults

```
supervisor_log_flags = 127  
supervisor_log_flags = "job,subjob,work,callback,user,admin,mail"
```
