

# Qube 6.10-1a Release Notes

#####

@RELEASE: 6.10-1a

This is a Windows-specific release of only the supervisor and core packages, and includes library modules and binaries rebuilt against a version of Perl that has been built in-house at PipelineFX from source.

IMPORTANT: A note about Perl versions on Windows workers

-----

Perl v5.16 is the only supported version on Windows, and must be installed on all workers. All other versions of Perl are unsupported.

==== CL 20341 ====

@CHANGE: made sure installed Perl versions other than 5.16 are detected as "unsupported" and properly rejected as such (Windows).
